JAY PARIKH

DevOps | Site Reliability | Platform Engineer

Vancouver, BC | 780-708-6756 | parikhjay009@gmail.com

PROFESSIONAL SUMMARY

Results-driven DevOps and Site Reliability Engineer with 9+ years of experience in cloud infrastructure, automation, CI/CD, and production reliability. Proven expertise in AWS, Kubernetes, Terraform, and Python with a strong foundation in network security and observability. Adept at designing scalable, self-healing systems, implementing SLO-driven reliability practices, and leveraging AI-powered tooling to accelerate engineering velocity. Passionate about building Internal Developer Platforms and reducing operational toil through automation and GitOps workflows.

TECHNICAL SKILLS

Cloud & Infrastructure	AWS (EC2, S3, RDS, Redshift, ElastiCache, Lambda, IAM, VPC, Security Groups, CloudWatch, Route 53, Systems Manager, Cost Explorer, Control Tower, GuardDuty), GCP (Basics), Azure (Basics)
IaC & Config Mgmt	Terraform, CloudFormation, CDK, Ansible, Puppet
Containers & Orchestration	Docker, Kubernetes (K8s/EKS), Helm, Istio (Service Mesh)
CI/CD & GitOps	Jenkins, GitHub Actions, ArgoCD, GitHub Enterprise, GitOps Workflows
Observability & Monitoring	Prometheus, Grafana, Datadog, Splunk, New Relic, ELK Stack (Elasticsearch, Logstash, Kibana), OpenTelemetry, PagerDuty
SRE Practices	SLOs/SLIs/Error Budgets, Incident Response & Postmortems, Chaos Engineering, DORA Metrics, Capacity Planning, Toil Reduction
Security & Compliance	DevSecOps, IAM Policies, KMS, Secrets Mgmt (HashiCorp Vault), Vulnerability Scanning (Black Duck, Snyk, SonarQube), Network Security, Encryption, SCPs
Scripting & Programming	Python, Bash, Go (Golang — Basics)
Networking & OS	Linux System Administration, TCP/IP, VPNs, DNS, DHCP, NAT, Routing (BGP, OSPF), Firewalls, Load Balancers, Wireshark, TCPDUMP
AI-Powered Dev Tools	Gemini, Opus, GPT, Antigravity, Cursor, Claude Code, GitHub Copilot, Perplexity
Databases	MySQL, PostgreSQL, Amazon Redshift, OpenSearch, Redis, MongoDB

PROFESSIONAL EXPERIENCE

DevOps Engineer
04/2022 — Present

Mastercard — *Vancouver, BC*

- Designed, implemented, and maintained robust CI/CD pipelines using Jenkins and GitHub Actions, automating build, test, and deployment workflows for microservices — reducing deployment lead time by 40%.
- Deployed and managed containerized applications using Docker and Kubernetes (EKS) across AWS production environments, ensuring 99.9%+ uptime for mission-critical services.
- Managed and optimized AWS cloud infrastructure (EC2, S3, IAM, RDS, ElastiCache, Redshift, Systems Manager) using Terraform and CloudFormation, implementing Infrastructure as Code best practices.
- Implemented blue/green and rolling deployment strategies to ensure seamless, zero-downtime production releases with rapid rollback capabilities.
- Built comprehensive observability stacks using Splunk, Datadog, and Prometheus/Grafana for monitoring, alerting, and SLO tracking — ensuring high availability and rapid incident response.
- Defined and tracked SLOs/SLIs and error budgets to drive data-driven reliability decisions, contributing to measurable improvements in DORA metrics (deployment frequency, lead time, MTTR).
- Collaborated with security teams to enforce DevSecOps best practices, including IAM policies, KMS encryption, vulnerability scanning (Black Duck, Snyk), and secrets management.
- Optimized MySQL RDS and OpenSearch database performance and reduced cloud spend by 20%+ using AWS Cost Explorer and rightsizing strategies.
- Automated data pipeline operations including Redshift data loading, S3 log parsing, and ETL scripts using Python and Bash on EC2 via AWS Systems Manager (SSM).
- Investigated and remediated AWS GuardDuty security findings, IAM policy violations, and Control Tower/SCP compliance issues across multi-account environments.

- Leveraged AI-powered development tools (GitHub Copilot, Cursor, Claude Code) to accelerate infrastructure automation, script development, and incident troubleshooting.

Cloud Infrastructure Engineer
01/2019 — 04/2022

Sophos Inc — *Vancouver, BC*

- Actively managed, improved, and monitored AWS cloud infrastructure, focusing on automated backups, patching, and auto-scaling to ensure production reliability and cost efficiency.
- Automated configuration management and system orchestration using Puppet and Ansible, reducing manual deployment efforts by 60% and ensuring environment consistency.
- Built and deployed Docker containers, contributing to the migration of monolithic applications to a microservices architecture, improving deployment velocity and fault isolation.
- Led an Observability Proof of Concept (PoC) using Elasticsearch, Logstash, Prometheus, and Kibana on AWS — establishing the foundation for a unified monitoring platform.
- Implemented GitOps workflows for infrastructure changes, improving audit trails, collaboration, and deployment reliability across development teams.
- Contributed to incident response processes, including on-call rotations, runbook creation, and blameless postmortems to foster a culture of continuous improvement.

Network Security Engineer
04/2017 — 01/2019

Sophos Inc — *Vancouver, BC*

- Provided advanced L3/L4 support for VIP enterprise customers on Sophos NSG security products, specializing in High Availability (HA), link redundancy, and dynamic routing (BGP, OSPF).
- Conducted deep-dive troubleshooting and root cause analysis (RCA) for complex network issues using Linux, Wireshark, and TCPDUMP — resolving critical escalations with 95%+ first-contact resolution.
- Managed configurations for VPNs, DNS, DHCP, NAT, and firewall policies, strengthening the security posture for enterprise-grade network environments.
- Developed Python and Bash automation scripts for log analysis and network diagnostics, reducing manual troubleshooting time.

EDUCATION

Master of Science in Computer Networks
09/2015 — 02/2017

University of Alberta — *Alberta, Canada*

Bachelor of Engineering in Electronics & Communication
06/2009 — 07/2013

Gujarat Technological University — *Gujarat, India*
